BIG BANG THEORY*

by Lanny and Marilyn Johnson

The Bible says that *“In the beginning God created the heaven and the earth.”* (Genesis 1:1). Yet there are people called atheists who do not believe in God. They have invented many ideas to explain where the Universe came from without God.

One of the ideas being taught today is that in the beginning was **“nothing”** and it exploded, making everything. But is that good science? Can nothing create everything? No; nothing can create nothing – nothing can do nothing – from nothing, nothing comes.^{1,2} No one has ever seen nothing making anything. It has never been observed (seen) - it is just a crazy idea.

Another idea teaches that about 15 billion years ago there was nothing out there except a small amount of mass, or **“stuff.”** Some people believe that this stuff was no bigger than your thumbnail. Others believe it could have been even smaller than that - the size of a pinhead, but some evolutionary textbooks teach that it was about the size of an egg. That is where we get the term **“cosmic egg”** or **“ylem.”**³ Now we must ask a question,

“Where did this stuff or cosmic egg come from?” Evolution has no answer. Was this cosmic egg laid by a cosmic chicken? If so, then we still have the same problem: “Where did the chicken come from?” Evolution teaches that this stuff must have just always been there. This cosmic egg was eternal matter.

Then, the idea is that something happened to this cosmic egg. Maybe it exploded or blew up.

This is where the **Big Bang Theory** comes from. What we must remember is that no one has ever observed (seen) a Big Bang. It is just a mathematical formula. From that mathematical formula came the idea that this explosion made hydrogen gas, and that this gas went screaming out into space. At the same time, however, some type of gravity force began to pull this gas together to form solids (like rocks and dirt). According to the Big Bang all the planets, the Earth, the Sun and all the stars were created in this way.

There are many problems with this Big Bang idea. First, if this cosmic egg was as small as believed, then the mass would have been squeezed together so tight that it would have had to have enormous weight, density, and gravity. If an explosion had happened, the tremendous gravity would not have allowed anything to go outward (explode). The gravity would have pulled everything in (implode) and never allowed any particles (stuff) to escape into space.

Second, the very nature of gases and how they act goes

against the idea of the Big Bang. As cold gasses begin to come together, the small gas particles begin to bump into each other. The closer they get to each other the faster they bump into one another, producing friction. To understand a little about friction, try this: put your hands together and rub them against each other. You are making friction. What else are you making? You are making heat. When gases are pushed together they produce friction, which creates heat. When gas particles heat up, they build up pressure and begin to expand (dissipate). Gas pressures are more powerful than gravity. So stars could not have been formed by a gas cloud because instead of the gas cloud getting smaller and smaller, it would get bigger and bigger.⁴

The Laws of Science show us that the idea of a Big Bang is impossible. Someone had to create the Universe. It cannot be the result of a big explosion. According to the first verse of the Bible (Genesis 1:1) God created the Universe.
